Indigenous Australians have traditionally played some exciting games, but without any of the manufactured products we have today. In many ways our increasing consumption of manufactured products is causing great damage to our environment.

Imagine you no longer have access to any of the sporting equipment currently available to you at home (e.g. balls, bikes, skipping ropes, etc.) and design a physically active game that can be played by two or more people, requiring only natural resources (used in an environmentally friendly way).

Make sure you include:
- A name for your game
- Rules
- Equipment required and where to find them/how to make them
- Where to play

You may modify an existing game by substituting the equipment required with natural resources, however you will therefore also need to modify how the game is played.

Present your event on an activity card or poster, so that others may read it and understand how to play. Use diagrams and bullet points to make it simple to read.
